

Beginning C++ Programming

The 'this' Pointer

There is an error in the sample source code on the slide at around 1:58 in the video.

`Account::compare_balance` is defined, but then the example the compares the balance of `frank_account` to itself is written incorrectly as:

```
frank_account.compare(frank_account);
```

This should be written as:

```
frank_account.compare_balance(frank_account);
```

Thanks to Anshul for pointing it out.

Best regards,
Frank Mitropoulos
